Declaration

Plagiarism is defined as "the unacknowledged use, as one's own, of work of another person, whether or not such work has been published, and as may be further elaborated in Faculty or University guidelines" (University Assessment Regulations, 2009, Regulation 39 (b)(i), University of Malta).

I / ~~We~~*, the undersigned, declare that the [assignment / Assigned Practical Task report / Final Year Project report] submitted is my / our* work, except where acknowledged and referenced.

I / ~~We~~* understand that the penalties for committing a breach of the regulations include loss of marks; cancellation of examination results; enforced suspension of studies; or expulsion from the degree programme.

Work submitted without this signed declaration will not be corrected, and will be given zero marks.

* Delete as appropriate.

(N. B. If the assignment is meant to be submitted anonymously, please sign this form and submit it to the Departmental Officer separately from the assignment).

Statement of Completion

The questions below were the ones that have been attempted:

Question 1 This question has been successfully completed.

Question 2 This question has been successfully completed.

Question 3 This question has been successfully completed.

Question 4 This question has been successfully completed.

Question 5 This question has been successfully completed.

Question 6 This question has been successfully completed.

Question 7 This question has been successfully completed.

Question 8 This question has been successfully completed.

Question 9 This question has been successfully completed.

Task 4

Shell Sort

Since the requirement of this task was for the program to generate an array containing 16,384 elements, all of which are random numbers, and sort them, it is impossible to write the contents of the array for a reliable amount of tests and keep this document to a reasonable size. As a result, the program itself checks whether the array that has been sorted, is in fact sorted. This is done using the algorithm `checkSortedAscending` as given in Algorithm 1 (also included in the source code).

```
1 Algorithm: Check if sorted in ascending order
  Input: int array
  Output: boolean
2 for i = 0... length of array - 1 do
3 |   if element at i > element at i+1 then
4 |   |   return false
5 |   end if
6 end for
7 return true
```

Algorithm 1: checkSortedAscending(int[] array)

Task 5

Approximation of a Square Root

For this task, the Newton-Raphson algorithm was used, with the formula shown in Equation 5.2, which is basically a specific case of the general formula for the Newton-Raphson algorithm whcih is given in Equation 5.1.

$$x_{n+1} = x_n - \frac{f(x_n)}{f'(x_n)} \tag{5.1}$$

$$x_{n+1} = x_n - \frac{x_n^2 - \text{input}}{2x_n} \tag{5.2}$$

Task 6

Matrix Multiplication

The methods used in this programme were created to work for any $n \times n$ matrices, with n being specified by a constant in the program called `SIZE`. Since writing the tests for 32×32 matrices in this document would be too cumbersome, 3×3 matrices shall be tested instead.

It is worth noting that the matrices used to test the output are the matrices outputted by the program. Since the program rounds each matrix (matrices **A**, **B** and **AB**) to 2 d.p. (and the expected output is also being rounded to 2 d.p) the expected output and the actual output will not be exactly the same, but they should be approximately equal to each other.

A	**B**	Expected **AB**	Actual **AB**
$\begin{bmatrix} 6.72 & 1.99 & 1.73 \\ 3.85 & 0.00 & 3.82 \\ 2.02 & 8.81 & -2.13 \end{bmatrix}$	$\begin{bmatrix} -1.92 & 2.21 & -2.42 \\ -0.18 & -5.64 & 0.03 \\ -0.70 & -3.86 & -6.60 \end{bmatrix}$	$\begin{bmatrix} -14.47 & -3.05 & -27.62 \\ -10.07 & -6.24 & -34.53 \\ -3.97 & -37.00 & 9.43 \end{bmatrix}$	$\begin{bmatrix} -14.48 & -3.01 & -27.66 \\ -10.07 & -6.24 & -34.60 \\ -3.96 & -36.99 & 9.43 \end{bmatrix}$
$\begin{bmatrix} 0.98 & 8.13 & -1.21 \\ 2.36 & -3.08 & -3.51 \\ 9.54 & -7.90 & -8.48 \end{bmatrix}$	$\begin{bmatrix} 3.67 & -0.20 & -7.32 \\ -4.25 & -7.69 & 9.94 \\ 8.91 & 3.91 & -0.75 \end{bmatrix}$	$\begin{bmatrix} -41.74 & -67.45 & 74.55 \\ -9.52 & 9.49 & -45.26 \\ -6.97 & 25.69 & -142.00 \end{bmatrix}$	$\begin{bmatrix} -41.75 & -67.48 & 74.53 \\ -9.47 & 9.52 & -45.27 \\ -6.97 & 25.64 & -141.96 \end{bmatrix}$
